

John Muinde

SKILLS

Programming Languages

Python, R, SQL, JavaScript, Bash, C++

Tools

Conda, Rstudio, MYSQL, PostgreSQL, Nginx,

Docker, GitHub, CI/CD, Apache, Power BI,

Tableau, Google Analytics.

Cloud Computing

AWS, Digital Ocean.

Application Areas

Programming, Predictive analytics.

Machine learning, Time series forecasting

Data analytics, Business intelligence, Database

querying, Model development & deployment, API

development, S.W.E

STRENGTHS

I am a lifelong learner who adapts quickly to emerging technologies and the evolving world of data analytics.

Data Scientist/Data Analyst/Data Engineer

SUMMARY

I am a dedicated Data Scientist, Data Analyst and Data Engineer, who enjoys the challenge of working with data to generate actionable insights that drive decision making. My skill sets are not limited to data work only as I also poses software engineering experience hence able to build end-to-end solutions that address global challenges in line with the sustainable development goals. In my recent role, I have worked with population data to generate insight and forecast youth employment across the African continent. On a global scale, I have also been involved in projects that explore consumer population trends and demographic shifts to inform business strategies.

EDUCATION

Masters in Data Science and Analytics **2022 -2024**
Strathmore University

Bachelor's degree in Mathematics and Applied Statistics **2015 -2019**
Maseno University

EXPERIENCE

Associate Data Scientist **2023 - 2024**

World Data Lab

World Data Lab is a data enterprise that leverages data science methodologies to model and forecast population, consumer trends, category spending and demographic shifts from the macro to most granular level. During My time at World Data lab, my role entailed:

• Data Processing and analysis

- Carried out data scoping to identify, gather and evaluate relevant datasets.
- Cleaning and processing population as well as labour market and demographic data from varying sources such as national

statistics offices and global organisation

- Designing and implementing statistical / data science models to develop predictive models and generate actionable insights.

- **Visualization and Communication:**

- Took part in developing the Africa youth jobs clock that tracks employment trends across the continent. The link to the clock can be found [here](#)
- Developed charts and other visualizations to effectively communicate findings to technical and non-technical organizations. Here are a few public insights.
- Africa's Population by generations. [here](#)
- Kenya's Population breakdown 2024. [here](#)
- [Consumer trends](#)

- **Collaboration and Stakeholder Engagement**

- Worked closely with senior data scientists to refine methodologies and ensure the quality of outputs.
- Took part in stakeholder meetings to understand their data needs and ensure that the insights I generated were tailored to meet their objectives.
- Supported the development and maintenance of user-friendly data tools that enhance the accessibility and usability of insights

- **Data Quality Assurance:** Implemented data validation checks and regular audits to ensure pipeline data quality.

- **Ad-Hoc Data Requests:** Responded to data requests, preparing reports and datasets for business decisions by the Master Card Foundation.

- **Documentation:** Created and maintained code documentation for all the projects in which I was involved.

- **Learning and Development:** Actively learned new data tools and practices in relation to population modelling.

Research Student (Data Scientist)

2022-2023

[International Center of Insect Physiology & Ecology \(ICIPE\)](#)

ICIPE is a research organization that seeks to leverage science to ensure food security and improve the overall health status of the world. My role at ICIPE entailed the following responsibilities.

- **Data Processing and analysis**

- Collecting farm production data by developing an automated data collection system for farmers using ODK and KoBo toolbox.
- Prepared the data for analysis using data science techniques to

clean and process the data.

- **Dashboard development and model deployment.**

- Developed and deployed a production dashboard as a decision support system to assist farmers in predicting expected harvest and monitoring rearing metrics to optimise production. [View Dashboard](#) .
- Developed an API to deploy the selected algorithm and power the dashboard's backend. [API](#) link.

- **Publications**

- I was also tasked with writing and publishing research work while at ICIPE. <https://doi.org/10.3390/insects14050479>

REFEERES

1. Sajni Malde

Senior Data Scientist

World Data Lab

Email: sajni.malde@worlddata.io

Phone no: +254 798 120 950

2. Dr. Kennedy Senagi

Data Management, Modelling, and Geo-Information Unit

International Centre of Insect Physiology and Ecology

Email: ksenagi@icipe.org

Phone no: +254 208 632 484

3. Dr. John Olukuru

Head of Data Science and Analytics

Strathmore University
